## Customer Opinion

Approve and no objectionReject with the following reason：[^0]
## Features

$3.2 \mathrm{~mm} \times 1.6 \mathrm{~mm}$ SMD LED, 1.1 mm thickness

Low power consumption
Wide view angle
Package: 3000pcs/reel
RoHS Compliant

## Applications

Ideal for back light and indicator
Various colors and lens types available

## Package outlines

## Reflow Profile

- Reflow Temp/Time

Notes:

1. We recommend the reflow temperature $245^{\circ} \mathrm{C}\left( \pm 5^{\circ} \mathrm{C}\right)$.the maximum soldering temperature should be limited to $260^{\circ} \mathrm{C}$.
2. Don't cause stress to the epoxy resin while it is exposed to high temperature.
3. Number of reflow process shall be 2 times or less.

■Soldering iron
Basic spec is $\leqslant 5 \sec$ when $320^{\circ} \mathrm{C}\left( \pm 20^{\circ} \mathrm{C}\right)$. If temperature is higher, time should be shorter $\left(+10^{\circ} \mathrm{C} \rightarrow-1 \mathrm{sec}\right)$. Power dissipation of iron should be smaller than 20W, and temperatures should be controllable .Surface temperature of the device should be under $350^{\circ} \mathrm{C}$.

## ■Rework

1. Customer must finish rework within 5 sec under $340^{\circ} \mathrm{C}$.
2. The head of iron cannot touch copper foil
3. Twin-head type is preferred.

Avoid rubbing or scraping the resin by any object, during high temperature, for example reflow solder etc.

## Test circuit and handling precautions

■ Test circuit

- Handling precautions

1. Over-current-proof

Customer must apply resistors for protection; otherwise slight voltage shift will cause big current change (Burn out will happen).
2. Storage
2.1 It is recommended to store the products in the following conditions:

Humidity: 60\% R.H. Max.
Temperature: $5^{\circ} \mathrm{C} \sim 30^{\circ} \mathrm{C}$
2.2 Shelf life in sealed bag: 12 month at $<5^{\circ} \mathrm{C} \sim 30^{\circ} \mathrm{C}$ and $<30 \%$ R.H. after the package is opened, the products should be used within a week or they should be keeping to stored at $\leqq 20$ R.H. with zip-lock sealed.

## 3. Baking

It is recommended to baking before soldering when the pack is unsealed after 72 hrs . The Conditions are as followings:
$3.160 \pm 3^{\circ} \mathrm{C} \times\left(12^{\sim} 24 \mathrm{hrs}\right)$ and $<5 \% R H$, taped reel type
$3.2100 \pm 3^{\circ} \mathrm{C} \times(45 \mathrm{~min} \sim 1 \mathrm{hr})$, bulk type
$3.3130 \pm 3^{\circ} \mathrm{C} \times\left(15^{\sim} 30 \mathrm{~min}\right)$, bulk type

## Notes:

1.The tolerance of luminous intensity (Iv) is $\pm 15 \%$.
2. The tolerance of dominant wavelength is $\pm 1 \mathrm{~nm}$.
3. This specification is preliminary.
4. This specification is a standard specification of our factory, can make in accordance with customer's special requirement.

- Arrangement of Tape

Feeding Direction

## Notes:

1. Empty component pockets are sealed with top cover tape;
2. The maximum number of missing lamps is two;
3. The cathode is oriented towards the tape sprocket hole in accordance with ANSI/EIA RS-481 specifications.
4. $4,000 \mathrm{pcs} /$ Reel.

## 3216 Series SMD Chip LED Lamps Packaging Specifications

## - Packaging specifications

Notes:
Reeled products (numbers of products are $3,000 \mathrm{pcs}$ ) packed in a seal off moisture-proof bag along with a desiccant one by one, ten moisture-proof bag of maximums (total maximum number of products are $30,000 \mathrm{pcs}$ ) packed in an inside box (about size: $240 \times 230 \times 130 \mathrm{~mm}$ ) and four inside boxes of maximums are put in the outside box (about size: $545 \mathrm{~mm} \times 260 \mathrm{~mm} \times 250 \mathrm{~mm}$ ) Together with buffer material, and it is packed. (Part No., Lot No., quantity should appear on the label on the moisture-proof bag, part No. And quantity should appear on the label on the cardboard box.) The number of the loading steps of outside box (cardboard box) has it to three steps.
