Reflow Profile

■ Reflow Temp/Time

Notes:

- 1. We recommend the reflow temperature 245 $^{\circ}$ C (±5 $^{\circ}$ C).the maximum soldering temperature should be limited to 260 $^{\circ}$ C.
- 2. Don't cause stress to the epoxy resin while it is exposed to high temperature.
- 3. Number of reflow process shall be 2 times or less.

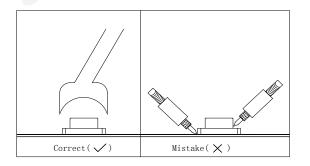

■Soldering iron

Basic spec is ≤ 5sec when 320°C (±20°C). If temperature is higher, time should be shorter (+10°C → -1sec).

Power dissipation of iron should be smaller than 20W, and temperatures should be controllable .Surface temperature of the device should be under 350°C.

Rework

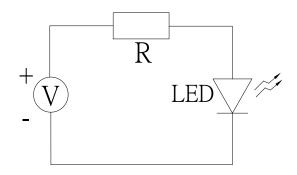

- 1. Customer must finish rework within 5 sec under 340°C.
- 2. The head of iron cannot touch copper foil
- 3. Twin-head type is preferred.

Avoid rubbing or scraping the resin by any object, during high temperature, for example reflow solder etc.

Test circuit and handling precautions

Test circuit

Handling precautions

1. Over-current-proof

Customer must apply resistors for protection; otherwise slight voltage shift will cause big current change (Burn out will happen).

2. Storage

2.1 It is recommended to store the products in the following conditions:

Humidity: 60% R.H. Max.

Temperature: 5°C~30°C

- 2.2 Shelf life in sealed bag: 12 month at $<5^{\circ}C^{\sim}30^{\circ}C$ and <30% R.H. after the package is opened, the products should be used within a week or they should be keeping to stored at \leq 20 R.H. with zip-lock sealed.
- 3. Baking

It is recommended to baking before soldering The Conditions are as followings: 60±5°C/24hrs.
